

Hop On!

11 Tips and Tricks to Get the Most Out of your Motorbunny

Got additional tips?
Help a bunny out, and let us know!
support@motorbunny.com

Congratulations on joining the Motorbunny community!

We believe sex should be both fun and accessible, so we make amazing sex toys with these two tenets in mind.

Motorbunny was created to help you enhance your sexual life and also reduce the financial risks of experimentation.

Our lighthearted “goes to 11” philosophy is a cheeky way of expressing how strongly we feel about our mission. Never stop exploring, playing, and relishing life!

We’re not here to tell you what to do, but the following 11 tips can help you learn more about the Motorbunny experience. And just know sometimes it takes several experiences to get comfortable with Motorbunny and learn how it works for you. But that’s okay, let it take you beyond what you’ve ever thought possible.

Tip #1 – Take care of business

Use the restroom before hopping on. This will make getting off—and then dismounting your Motorbunny when you're done a little ea

Tip #2 – Set up for success

Literally: Set your Motorbunny up for the most effective functionality and successful enjoyment.

Put your Motorbunny on a firm surface, like the floor or a bed—but not a waterbed.

If on the floor, we suggest placing the Motorbunny on a soft blanket or towels to give your knees a break. This will also help to dampen Motorbunny's vibrations. It's also helpful to set your Motorbunny up next to a couch or bed so you have something to help you to balance.

If on a bed, make sure your Motorbunny is near the center of the mattress (versus closer to an edge).

No matter what firm surface you use, always have Motorbunny's controls near your hands or in the hands of a partner.

Tip #3 – Check your Motorbunny baseline

Just like musicians do a sound check before every performance, make sure you have your Motorbunny's baseline in order before you hop on. Is everything good to go?

Make sure your Motorbunny controls are set to zero, and make sure you have plenty of water-based lubricant on hand.

Do not use silicone-based or oil-based lubes with your Motorbunny. These types of lubricants can damage Motorbunny attachments and will make cleanup far more tedious than it needs to be.

Start your Motorbunny only after you're ready and have hopped on and settled in.

Tip #4 – Bunny hops (Start small!)

Resist the temptation to jump ahead. Start at the beginning with your Motorbunny, and start small.

We recommend that first-time users begin with the flat clitoral attachment. This gives you the opportunity to find a good, comfortable straddle position before getting into attachments designed for penetration.

Once you've tried out all the attachments included in the Motorbunny Starter Kit, you might feel like getting more adventurous. Not to worry—We have a range of additional premium silicone attachment options available at motorbunny.com.

Tip #5 -- Rise up!

No two bodies are the same, and you may find that yours likes a little bit of an angle adjustment. Good thing your Motorbunny comes with the perfect accessory to add that extra boost--risers.

Two attachment risers are included in the Motorbunny Starter Kit. These attach to the top of the Motorbunny platform, positioned right beneath your favorite attachment, to increase contact with your clitoris.

Time to play a game of "See which riser is right for you!"

Tip #6 -- You go, cowgirl!

The most common Motorbunny position is a straddled cowgirl.

Straddle Motorbunny with the controls in front of you, your knees down, and your feet behind you. You can also try to pull your knees up nearer to your chest, with your feet flat on the floor. This is more like a rowdy cowgirl squat position – yeehaw!

Tip #7 -- Get up to get down

You might prefer the Lady Godiva—a straddled cowgirl with your Motorbunny raised up on a sturdy surface. In this position, your feet will be touching the ground, similar to the cowgirl squat, but your legs will be extended closer to a standing position.

Wild, just like Lady Godiva.

Note: It's important that whatever surface you put the Motorbunny on to raise it up is very sturdy, of sufficient surface size (no close edges), and can hold your weight plus the weight of the Motorbunny itself.

The Bunnyrest stool included in the Motorbunny Starter Kit is not designed for the Motorbunny to be used on top of in this manner.

Tip #8 -- Find your groove

The Motorbunny Starter Kit includes a Bunnyrest—a small stool perfect for leaning forward and backward on while you straddle your Motorbunny.

Play with the controls and your body position to find the perfect combination for you.

Leaning forward with your hands on the Bunnyrest increases contact with your clitoris.

Leaning back with your hands on the Bunnyrest will increase pressure on your G-spot.

Tip #9 – Motorbunny for two

Is someone else interested in getting in on the action?

The Bunnyrest is also ideal for a partner to sit on while adding to your experience.

Tip #10 -- Take this lying down

On a bed or even on the floor, some people choose to lie down fully and use their heels to hold the Motorbunny in place.

Tip #11 -- Never stop experimenting!

Seriously – and this is the only time we will ever be super serious -- even if you find a position and settings that you love, there's always a chance something even more mind-blowing is around the corner. The wide range of attachments, positions, and Buzz and Twirl control settings provide endless combinations for unique, fun experiences.

One accessible way to play is by trying different Buzz and Twirl control setting combinations. Some people like "The Safe Driver," with Buzz at 10 and Twirl at 2. Some enjoy the "Answer to the Ultimate Question of Life, the Universe, and Everything," with settings at 4 and 2, respectively. We've also heard that 7-11 is quite convenient.

You get the idea. Hop on, turn it up, lean in, lean back, lean whatever way feels good—just never stop experimenting!
